

At Fios Genomics we believe that it is important to support your research not only when data analysis is required but also at the very first stages, from the study design and technology selection.

To ensure a smooth workflow and schedule, a project manager is allocated for each project and we maintain constant contact with our clients to ensure their requirements are met.

HOW IT WORKS

1) Enquiry: Engaging with Fios Genomics is very simple and it is possible to contact us at every stage of your research via phone or email at info@fiosgenomics.com. A member of our staff will be in touch within 24 hours upon receiving an enquiry.

2) Project Discussion: Requirements, approaches and deliverables are discussed directly with our client, and then a project proposal is issued and sent for approval.

3) Data Sourcing: It is possible for us to receive data in any form and a variety of data transfer methods are available. For more information, visit fiosgenomics.com.

4) Data Analysis & Report: A bespoke analysis is performed as per our clients' requirements and is followed by the production of an interactive securely hosted web report. This report format is easy to interrogate and allows the client to fully explore the data. A static PDF version of the report is also available for downloading and sharing.
